Light Transmission (LT) has been determined with a spectrophotometer in the wavelength range 360 to 780nm in accordance with EN ISO 13468-2.

The light transmission values are typical ones, the actually measured values are subject to production variations.

**Just for comparison: in the last column are the LT values that have been reported in the past as the arithmetic average of the individual LT at wavelengths from 400 to 700nm*
